

Design, Build and Validate Software Ideas with Rapid Prototyping

ACCELERATING INNOVATION

To compete at the highest level, innovation is more important than ever. This means you not only need to be aware of the innovation challenges that modern, growing businesses face, you also need to stay ahead of them. Since your company's ability to lead the market depends on delivering exceptional digital experiences and products, how do you accelerate innovation within your enterprise?

DESIGN, PROTOTYPE AND VALIDATE YOUR NEXT SOFTWARE PROJECT

Rapid Prototyping from AgileThought is a comprehensive, two-week process that answers critical business questions through design, prototyping and testing ideas with customers and stakeholders. Consider it the perfect mix of business strategy, innovation, behavior science and design thinking— packaged into a proven process that any team can use. Rapid Prototyping leverages both agile and Lean UX principles to produce a number of outputs based on the needs of the organization. These outputs are beneficial in two ways:

- › Discover how to use “Design Thinking” to build products your customers want and need
- › Eliminate workflow bottlenecks and go from idea to proof of concept quickly and efficiently

With Rapid Prototyping, you will now be able to present a prototype to stakeholders, clients or users within weeks as opposed to months.

Consider Rapid Prototyping the perfect mix of business strategy, innovation, behavior science and design thinking— packaged into a proven process that any team can use.

Key Benefits

- › Discover how to use “Design Thinking” to build products your customers want and need
- › Eliminate workflow bottlenecks and go from idea to proof of concept quickly and efficiently
- › Increase speed to market by applying “Lean” principles
- › Excite team members and stakeholders with hands-on, interactive demos
- › Get your team out of documenting features and into building them
- › Improve quality and reduce risk with product testing and user validation
